Record overview

Report created: Oct 25, 2026 at 7:27 PM

Recorded on: Oct 8, 2026 at 10:00 AM

Report time zone: America/Chicago

Dates are shown in the report time zone.

Name (optional): _____

Review date (optional): _____

Synthetic example, not a real record

Right arm

Routine: Arm raise

Source: Camera estimate

2 of 3 attempts counted

Arm angle summary: 111 degrees

What this number means

Degrees describe your arm angle from your body in the picture.

The summary uses the middle value of counted attempts. With two, it uses their average.

Observed variation: 101 to 121 degrees

This spread shows variation between attempts. It is not a measurement error range.

A larger or smaller number does not tell you whether your health changed.

Review at a glance

This report contains personal movement records, not a full health record.

Read the tracking limits and missing information before using these numbers.

For personal tracking only. Not medical advice or a diagnosis. Share with your clinician.

Attempts and recording details

Attempt 1: Counted

Projected angle: 101 degrees

Recording duration: 6.0 seconds

Attempt 2: Not counted

Your phone tilted during the attempt. Prop it upright and try again.

Recording duration: 6.1 seconds

Attempt 3: Counted

Projected angle: 121 degrees

Recording duration: 6.2 seconds

Attempts not counted

1 not counted: Your phone tilted during the attempt. Prop it upright and try again.

Recording context

Camera or entry source: Front camera

App version at saving: 1.0 (1)

Method version at saving: bearing-4

Time zone at saving: America/Chicago

Frame rate, joint coverage, and phone angles were not saved as separate measurements.

A counted attempt met the recording rules. It does not confirm correct movement or health.

For personal tracking only. Not medical advice or a diagnosis. Share with your clinician.

Continued

How these were measured

The picture angle uses your shoulder, hip, and elbow from the front.

Each counted angle uses the middle of the highest fresh, smoothed picture-angle samples.

Setup checks cover phone tilt, body framing, and steady tracking.

Held joint positions cannot count as fresh measurements.

These checks use engineering settings, not medical cutoffs. Results compare only with your own earlier sessions.

Personal comparison and history

Your starting point: 111 degrees

Design choice: your first three sessions with at least two counted attempts each.

Oct 1, 2026 at 10:00 AM | 111 degrees

Oct 2, 2026 at 10:00 AM | 111 degrees

Oct 3, 2026 at 10:00 AM | 111 degrees

Difference from your own earlier sessions: +0 degrees

Plus means a larger number. Minus means a smaller number.

This is your own earlier record, not a target to reach.

Keep the same routine, side, and phone position when comparing sessions.

Matching saved records

History ends at the selected record. Later records are not included.

Routine, side or lifted foot, and custom template must match.

Showing 8 of 8 matching records, most recent first.

Date and time | Recorded value | Counted attempts

Oct 8, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

For personal tracking only. Not medical advice or a diagnosis. Share with your clinician.

Continued

Oct 7, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Oct 6, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Oct 5, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Oct 4, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Oct 3, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Oct 2, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Oct 1, 2026 at 10:00 AM | 111 degrees | 2 of 3 attempts counted

Records without a value remain visible. They do not enter the starting point.

One counted attempt can appear in history, but cannot enter the starting point.

Plan context and review notes

Your current plan

Arm raise

Weekly goal: 3 check-ins

The goal shown is your current goal.

Past goals and assignments were not saved. These counts use the current routine choices.

The weeks below end with the selected record's week.

Sep 14, 2026 at 12:00 AM | 0 saved check-ins

Sep 21, 2026 at 12:00 AM | 0 saved check-ins

Sep 28, 2026 at 12:00 AM | 4 saved check-ins

For personal tracking only. Not medical advice or a diagnosis. Share with your clinician.

Continued

Oct 5, 2026 at 12:00 AM | 4 saved check-ins

Saved entries do not prove that every planned exercise was completed.

This plan was entered on this phone. No professional assignment is verified.

Your instructions

Synthetic layout example. No person was recorded.

These are the instructions saved with this record. Their author is not verified.

Information Bearing does not collect

Pain, symptoms, injuries, and the reason for doing the routine are not recorded.

Medicines, medical history, vital signs, and physical examination findings are not recorded.

Use of support, crossed arms, and how closely instructions were followed are not verified.

No video, pictures, or raw joint sequences are saved for later review.

For personal tracking only. Not medical advice or a diagnosis. Share with your clinician.

Notes to discuss with your clinician

Add context when sharing. These blank lines are not saved health information.

Symptoms or discomfort during the routine: _____

Support or help used: _____

Changes since the last check-in: _____

Questions or requested follow-up: _____

Limits

A phone camera sees a flat picture, not 3D. This number estimates an angle in that picture.

Small differences can come from phone placement or lighting, not only from movement.

These estimates have not been checked in a medical study.

This report cannot establish a cause, a medication need, or which exercises are appropriate.

Created on this device when you asked for it. Shared only by you.

For personal tracking only. Not medical advice or a diagnosis. Share with your clinician.
